1 INTRODUCTION AND PURPOSE

1.1 Introduction

Ribble Valley Borough Council is currently preparing its Core Strategy. The Core Strategy is the central document of the Local Development Framework (LDF) and is produced under 'The Planning and Compulsory Act 2004'. The Core Strategy, once adopted, will be used to inform the determination of planning applications and decisions will be made in accordance with it.

Within Ribble Valley there are two sites that form part of the Natura 2000 Network and 13 sites within 15 kilometres (km) of the borough boundary. Natura 2000 is a network of areas designated to conserve natural habitats and species that are rare, endangered, vulnerable or endemic within the European Community. The sites forming part of the network are frequently referred to as 'European sites' and include Special Areas of Conservation (SAC) designated under the EC Habitats Directive 1992 (Council Directive 92/43/EEC) for their habitats and/or species of European importance and Special Protection Areas (SPA) classified under the EC Birds Directive (Council Directive 2009/147/EC) for rare, vulnerable and regularly occurring migratory bird species. There are also Ramsar Sites which are wetlands of international importance designated under the Convention on Wetlands, signed in Ramsar, Iran in 1971.

This Habitats Regulations Assessment (HRA) screening document has been produced during the preparation of the Publication Core Strategy. This approach will ensure that the options, objectives and core policies in the Core Strategy will avoid significant adverse impacts on protected sites of international importance which lie within a 15 km radius of the borough boundary.

1.2 Background to the Habitats Regulations Assessment

Under Article 6 of the Habitats Directive (and Regulation 61 of the Habitats Regulations), an assessment is required where a plan or project may give rise to significant effects upon a Natura 2000 site (also known as 'European site').

In addition to SACs and SPAs, it is a matter of law that candidate SACs (cSACs) and Sites of Community Importance (SCI) are considered in this process; furthermore, it is Government policy that sites designated under the 1971 Ramsar Convention for their internationally important wetlands (Ramsar sites) and potential SPAs (pSPAs) are also considered.

The requirements of the Habitats Directive are transposed into UK law by means of the Conservation of Habitats and Species Regulations 2010¹.

Paragraph 3, Article 6 of the Habitats Directive states that:

'Any plan or project not directly connected with or necessary to the management of the site but likely to have a significant effect thereon, either individually or in combination with other plans or projects, shall be subject to appropriate assessment of its implications for the site in view of the site's conservation objectives. In the light of the conclusions of the assessment of the

¹ SI 2010/490

implications for the site and subject to paragraph 4 (see below), the competent national authority shall agree to the plan or project only having ascertained that it will not adversely affect the integrity of the site concerned and, if appropriate, after having obtained the opinion of the general public’.

Paragraph 4, Article 6 of the Habitats Directive states that:

‘If, in spite of a negative assessment of the implications for the site and in the absence of alternative solutions, a plan or project must nevertheless be carried out for imperative reasons of overriding public interest, including those of social or economic nature, the Member State shall take all compensatory measures to ensure that the overall coherence of Natura 2000 is protected. It shall inform the Commission of the compensatory measures adopted.’

The overarching aim of HRA is to determine, in view of a site’s conservation objectives and qualifying interests, whether a plan, either in isolation and/or in combination with other plans, would have a significant adverse effect on the European site. If the Screening (the first stage of the process, see section 2.1 for details) concludes that significant adverse effects are likely, then Appropriate Assessment must be undertaken to determine whether there will be adverse effects on site integrity.

1.3 Legislation and Guidance

This HRA has drawn upon the following pieces of legislation and guidance:

- The Conservation of Habitats and Species Regulations 2010
- Department for Communities and Local Government (2006) Planning for the Protection of European Sites: Appropriate Assessment. Guidance for Regional Spatial Strategies and Local Development Documents.
- European Commission, Managing Natura 2000 sites: The provisions of Article 6 of the Habitats Directive 92/43/EEC.
- European Commission, Guidance document on Article 6(4) of the Habitats Directive 92/43/EEC.

2 THE HABITATS REGULATIONS ASSESSMENT PROCESS

This section provides an outline of the stages involved in HRA and the specific methods that have been used in preparing this report.

2.1 Stages in HRA

The requirements of the Habitats Directive comprise four distinct stages:

Stage 1: Screening is the process which initially identifies the likely impacts upon a European site of a project or plan, either alone or in-combination with other projects or plans, and considers whether these impacts may have a significant effect on the integrity of the site's qualifying habitats and/or species. It is important to note that the burden of evidence is to show, on the basis of objective information, that there will be no significant effect; if the effect may be significant, or is not known, that would trigger the need for an Appropriate Assessment. There is European Court of Justice case law to the effect that unless the likelihood of a significant effect can be ruled out on the basis of objective information, and adopting the precautionary principle, then an Appropriate Assessment must be made.

Stage 2: Appropriate Assessment is the detailed consideration of the impact on the integrity of the European site of the project or plan, either alone or in combination with other projects or plans, with respect to the site's conservation objectives and its structure and function. This is to determine whether or not there will be adverse effects on the integrity of the site. This stage also includes the development of mitigation measures to avoid or reduce any possible impacts.

Stage 3: Assessment of alternative solutions is the process which examines alternative ways of achieving the objectives of the project or plan that would avoid adverse impacts on the integrity of the European site, should avoidance or mitigation measures be unable to cancel out adverse effects.

Stage 4: Assessment where no alternative solutions exist and where adverse impacts remain. At Stage 4, an assessment is made with regard to whether or not the development is necessary for imperative reasons of overriding public interest (IROPI). If it is, this stage also involves detailed assessment of the compensatory measures needed to protect and maintain the overall coherence of the Natura 2000 network.

2.2 Applying HRA to the Core Strategy

The HRA process should be applied to all aspects of the Core Strategy which could have potential impacts upon a European site. This includes the Key Statements and the Development Management Policies.

The SA process which is being undertaken in parallel to this HRA will also consider the effects of the alternative options on European sites in order to avoid potential damaging options being brought forward.

A screening of the likely significant effects of the options developed to-date is provided in Section 4.

2.3 Definition of Significant Effects

The critical part of the HRA screening process is determining whether the Core Strategy is likely to have a significant effect on European sites and, therefore, if it will require an Appropriate Assessment. Judgements regarding significance should be made in relation to the qualifying interests for which the site is of European importance and also its conservation objectives. A useful definition of significant effects is provided in Welsh planning guidance² which can be drawn upon in this case:

'...likely means readily foreseeable not merely a fanciful possibility; significant means not trivial or inconsequential but an effect that is potentially relevant to the site's conservation objectives'.

2.4 In Combination Effects

As outlined in section 2-1, it is necessary for the HRA to consider not only the strategy and policies within the Publication Core Strategy that may lead to significant impacts upon European sites on their own, but those that may have a significant impact in combination with other plans. These may be general spatial planning documents produced by neighbouring planning authorities, or sector specific strategic plans on such topics as waste, water resources or transport. Table 2-1 presents details of the plans and projects considered.

Table 2-1 Plans and Projects Considered for In Combination Effects

Authority	Relevant Plan/Project
United Utilities	Water Resources Management Plan (2009)
Lancashire County Council	Local Transport Plan 2011 – 2021: A Strategy for Lancashire May 2011
Lancashire County Council	Local Transport Plan 2011-2021: Delivering our Priorities Implementation Plan for 2012/13 – 14/15 July 2012
North Yorkshire County Council	North Yorkshire Local Transport Plan 2011-16
Lancashire County Council	Joint Lancashire Minerals and Waste Development Framework Core Strategy (2009)
Lancashire County Council	Forest of Bowland Area of Outstanding Natural Beauty (AONB) Management Plan 2009 - 2014

²http://new.wales.gov.uk/docrepos/40382/epc/planning/403821/403827/40382/860788/Final_Copy_Consultation_Doc1.pdf?lang=en

Authority	Relevant Plan/Project
Burnley Borough Council	The Burnley Local Plan (adopted 2006)
Hyndburn Council	Hyndburn Core Strategy (Adopted 2012)
Blackburn with Darwen Borough Council	Core Strategy (Adopted 2011)
Preston City Council	Central Lancashire Core Strategy (adopted 5 July 2012)
South Ribble Borough Council	Central Lancashire Core Strategy (adopted 18 July 2012)
Wyre Borough Council	Wyre Local Plan (Adopted 1999)

It should be noted that in-combination effects only require consideration where the plan being assessed has an impact, whether significant or not. A conclusion of 'Zero Effects' negates the possibility of in-combination effects.

2.5 Mitigation Measures

In preparing this HRA Screening Report, consideration has been given to potential avoidance and mitigation measures which would serve to avoid adverse effects on the integrity of European sites, for example the provision of specific clauses within the policies that may prevent effects occurring.

3 THE EUROPEAN SITES

Fifteen European sites have been identified within the Core Strategy area and 15km from Ribble Valley's boundary. A list of the sites together with their status and location is presented in Table 3-1. Figure 1 also shows the locations of the European sites identified in Table 3-1.

Table 3-1 European Sites Located within Ribble Valley and within 15km of Ribble Valley

Name of Site	Identification Number	Status
North Pennine Dales Meadows (in borough)	UK0014775	SAC
Bowland Fells (in borough)	UK9005151	SPA
Ingleborough Complex	UK0012782	SAC

Morecambe Bay	UK11045	Ramsar
Morecambe Bay	UK9005081	SPA
Morecambe Bay	UK0013027	SAC
Calf Hill and Cragg Woods	UK0030106	SAC

Table 3-2 provides further information regarding the European sites including current conditions, threats and the results of the 2011 condition survey.

The boundaries of the sites are located on Figure 1.

3.1 Conservation Objectives of the European Sites

Under Regulation 35(3) of the Conservation of Habitats and Species Regulations 2010 the appropriate statutory nature conservation body (in this case Natural England) has a duty to communicate the conservation objectives for a European site to the relevant/competent authority responsible for that site. The information provided under Regulation 35 must also include advice on any operations which may cause deterioration of the features for which the site is designated.

The conservation objectives for a European site are intended to represent the aims of the Habitats and Birds Directives in relation to that site. To this end, habitats and species of European Community importance should be maintained or restored to 'favourable conservation status' (FCS), as defined in Article 1 of the Habitats Directive below:

The conservation status of a natural habitat will be taken as 'favourable' when:

- Its natural range and the area it covers within that range are stable or increasing;
- The specific structure and functions which are necessary for its long term maintenance exist and are likely to continue to exist for the foreseeable future; and
- Conservation status of typical species is favourable as defined in Article 1 (i).

The conservation status of a species will be taken as favourable when:

- Population dynamics data on the species concerned indicate that it is maintaining itself on a long-term basis as a viable component of its natural habitats;
- The natural range of the species is neither being reduced nor is likely to be reduced for the foreseeable future; and
- There is, and will probably continue to be, a sufficiently large habitat to maintain its populations on a long-term basis.

Guidance from the European Commission³ indicates that the Habitats Directive intends FCS to be applied at the level of an individual site, as well as to habitats and species across their European range. Therefore, in order to properly express the aims of the Habitats Directive for an individual site, the conservation objectives for a site are essentially to maintain (or restore) the habitats and species of the site at (or to) FCS.

The Conservation Objectives for the North Pennine Dales Meadows SAC and the Bowland Fells SPA have been obtained from Natural England's website⁴. A copy of the Conservation Objectives for the Bowland Fells SPA and the North Pennine Dales and Meadows SAC are provided in Appendix A.

	quaking bogs		<p>attempts to achieve balanced management. MAFF's Countryside Stewardship Scheme and English Nature's Wildlife Enhancement Scheme (WES) are also being used to achieve favourable management.</p> <p>Management of the site, especially north of the National Park, is further complicated by the large number of commons. Atmospheric pollution over the last few hundred years has depleted the lichen and bryophyte flora and may be affecting dwarf-shrubs. The impact has arguably been greatest on blanket bog, wet heath and transition mire where the bog-building Sphagnum mosses have been largely lost. Combined with historical overgrazing, burning (accidental and deliberate), drainage and locally trampling, large areas of blanket bog have become de-vegetated and eroded.</p> <p>There is no woodland included in the site to the north of the National Park. Remaining woods are often unfenced and open to grazing which restricts tree regeneration. In some Rhododendron has invaded, choking out native flora. These issues are being tackled through the Forestry Commission's Woodland Grant Scheme and Challenge</p>

			Fund for creating new native woodland, MAFF's North Peak ESA and English Nature's WES though more incentive and resources are needed. As well as restoring existing stands of woodland there is an emphasis on re-creation to expand and link fragments which inevitably involves changing existing habitats. This will raise questions over the balance of vegetation types NE wish to see on the site but given woodland would naturally have covered much of the area NE need to treat its expansion seriously. The flora of woodlands, quality as with bog and heath, has suffered from poor air quality. Again, it is less clear what can be done to reverse this situation other than to try and ensure continued improvements in air quality to allow affected species to recolonise if they can.		
South Pennine Moors Phase 2 SPA	N/A	This site qualifies under Article 4.1 of the Directive (79/409/EEC) by supporting bird populations of European importance listed on Annex I of the Directive: During the breeding season; <ul style="list-style-type: none"> ▪ Short eared owl <i>Asio flammeus</i> 0.3% of the GB breeding 	The South Pennine Moors SPA (Phase 2) is flanked two sides by large industrial urban areas, which means that large numbers of people use the area for recreational activities. Maintenance of the ecosystems on which the birds depend relies on appropriate grazing levels and burning regimes, and overgrazing by sheep is a key pressure on the site. 4 SCREENING

4.1 Context

The Core Strategy will be the prime document setting out key elements of the planning framework, key objectives, and core planning policies for development needs such as housing, employment, retail and community infrastructure.

The Core Strategy is the most important document under the LDF which sets out the long term vision for the whole of Ribble Valley.

4.2 Elements of the Core Strategy

Elements of the Core Strategy used in the screening assessment are listed in Table 4-1. Note that the housing proportions have not been amended since the residual proportions identified in the previous version of this report in March 2012. Note, however, that whilst a number of units have been completed in this period the overall proportions of development for each settlement remain unchanged.

Table 4-1 Elements of the Core Strategy

Elements of the Core Strategy	Description
Spatial Strategy	<p>4000 houses will be required over a 20 year period (2008-2028), with 3007 residual units still required to be approved and constructed. The majority of new housing development (34.6%) will be concentrated within an identified strategic site located to the south of Clitheroe towards the A59 and the main urban areas of the borough. Strategic employment opportunities will be promoted through the development of the Barrow Enterprise Site as a main location for employment, and the Salmesbury Enterprise Zone.</p> <p>11.6% of development will be promoted in Clitheroe itself with a further 18.6% in Longridge and 8% in Whalley. The remaining 27% (816 units over the plan period) will be spread amongst other settlements where there is an identified local need and planning policy allows.</p>
Key Statements	Fourteen overarching statements of approach covering a range of environmental, social, economic and access topics.
Development Management Policies	Twenty two policies which build upon the Key Statements covering a similar range of topics. These will be used to help determine planning applications in the future.

4.3 Screening of the Preferred Options

We have split the screening process into two distinct stages, initial screening and detailed screening. The initial screening stage provides a high level screening ‘matrix style’ assessment to determine if the Core Strategy would lead to adverse effects to the integrity of the European sites identified in Table 3-1. Those European sites that were identified to be potentially at risk or an uncertainty was identified due to the proposals and policies of the Core Strategy, were carried forward into a more detailed screening ‘matrix style’ assessment.

The sections below outline the initial and detailed screening of the preferred options within the Core Strategy.

4.3.1 Initial Screening of the Preferred Options

Initial screening of the Core Strategy is presented in Table 4-2 below.

The spatial strategy, Key Statements and Development Management (DM) Policies set out in the Core Strategy were initially examined to determine their need for further detailed assessment.

The notations below were used to indicate if further detailed assessment is required:

- ✓ Further detailed assessment is required to determine the nature of effects on the European site.
- ✗ No further assessment is required as no effects are predicted on the European site.

Table 4-2 Initial Screening of the Core Strategy

European Sites	Core Strategy Element (Further assessment required: ✖/✓)			Comments
	Spatial Strategy	Key Statements	DM Policies	
North Pennine Dales Meadows SAC	✓	✓	✓	<p>The spatial strategy identifies that 27% of housing developments is to be delivered in 'other' settlements according to local needs. European Sites	Core Strategy Element (Further assessment required: ✘/✔)			Comments
	Spatial Strategy	Key Statements	DM Policies	
Ingleborough Complex SAC	✘	✘	✘	The site lies 7.7 km north of the Ribble Valley boundary. It is designated for habitats and there are no elements of the Core Strategy which are likely to affect these over this distance.
Craven Limestone Complex SAC	✘	✘	✘	The site lies 10.4 km north-east of the Ribble Valley boundary. It is designated for a range of habitats, white-clawed crayfish, Bullhead and the Lady's slipper orchid. There are no elements of the Core Strategy which are likely to affect these over this distance. In particular, Ribble Valley is not hydrologically connected to the aquatic species listed.
Malham Tarn Ramsar Site	✘	✘	✘	The site lies 13.2 km north-east of the Ribble Valley boundary. It is designated for a range of habitats, invertebrates and plant species. There are no elements of the Core Strategy which are likely to affect these over this distance.
North Pennine Moors SAC	✘	✘	✘	The site lies 11.8 km north-east of the Ribble Valley boundary. It is designated for a range of habitats, and plant species. There are no elements of the Core Strategy which are likely to affect these over this distance.
North Pennine Moors SPA	✔	✔	✔	There is the possibility of a functional link with Bowland Fells SPA for Hen Harrier and Merlin. As such, it has been taken forward for further investigation on the same grounds.
South Pennine Moors SPA Phase 2	✔	✔	✔	There is the possibility of a functional link with Bowland Fells SPA for Merlin. As such, it has been taken forward for further investigation on the same grounds.
South Pennine Moors SAC	✘	✘	✘	The site lies 9 km south east of the Ribble Valley boundary. It is designated for habitats and there are no elements of the Core Strategy which are likely to affect these over this distance.
Ribble and Alt Estuaries Ramsar Site	✔	✔	✔	There is the possibility of a functional link with Bowland Fells SPA for Lesser Black-Backed Gull. As such, it has been taken forward for further investigation on the same grounds.
Ribble and Alt Estuaries SPA	✔	✔	✔	There is the possibility of a functional link with Bowland Fells SPA for Lesser Black-Backed Gull. As such, it has been taken forward for further investigation on the same grounds.
Morecambe Bay SAC	✘	✘	✘	The site lies 12.3 km west of the Ribble Valley boundary. It is designated for coastal habitats and Great crested newts (which have a maximum range of up to 1.2km ⁵). There are no elements of the

European Sites	Core Strategy Element (Further assessment required: ✘/✔)			Comments
	Spatial Strategy	Key Statements	DM Policies	
SAC				Great crested newts (which have a maximum range of up to 1.3km ⁵). There are no elements of the Core Strategy which are likely to affect these over this distance.
Morecambe Bay Ramsar Site	✔	✔	✔	There is the possibility of a functional link with Bowland Fells SPA for Lesser Black-Backed Gull. As such, it has been taken forward for further investigation on the same grounds.
Morecambe Bay SPA	✔	✔	✔	There is the possibility of a functional link with Bowland Fells SPA for Lesser Black-Backed Gull. As such, it has been taken forward for further investigation on the same grounds.
Calf Hill and Cragg Woods SAC	✘	✘	✘	The site lies 8.4 km north west of the Ribble Valley boundary. It is designated for habitats and there are no elements of the Core Strategy which are likely to affect these over this distance.

⁵ Natural England (2001) Great crested newt mitigation guidelines

Following the initial screening of the Core Strategy seven of the European sites have been screened out of the remainder of this assessment. Table 4-2 demonstrates that the distance of the European sites from proposed areas of development in Ribble Valley mean that significant effects are highly unlikely. The distance of Ribble Valley's borough boundary from the seven European sites screened out means that any pollution linkages are highly unlikely and no direct land take within the areas are required.

4.3.2 Detailed Screening of the Preferred Options

Detailed screening of the Core Strategy is presented in Tables 4-3 and 4-4 below based on the findings of the initial screening exercise.

The spatial strategy, Key Statements and Development Management Policies set out in the Core Strategy were examined in detail to determine the need for Appropriate Assessment. To aid clarity, only those elements identified as possibly having potential to have an effect have been listed in the table. The tables also consider whether any of the alternative options developed would be more or less likely to result in significant adverse effects than the preferred options. Eight alternative spatial options were developed and preliminary text was developed for each of the Key Statements and Development Management policies.

It was clear that the remaining elements would not have any potential to affect the European Sites either directly or indirectly due to the focus of their proposals. These would either be focussed on an irrelevant subject (e.g. heritage protection or provision of affordable housing), would be focussed directly on protection of nature conservation sites or would be focussed on a discrete geographical location a considerable distance from the sites and where there would be a negligible risk of indirect effects occurring.

The notations below were used to indicate if the policy should be taken forward to the Appropriate Assessment stage:

- ✓ Appropriate Assessment required
- ✗ No further assessment required

Table 4-3 Screening the Core Strategy: Bowland Fells SPA

Bowland Fells SPA					
Core Strategy Element	Development and Land Use Change and Potential Effects	Avoidance and Mitigation Potential	In-combination Effects Potential	Appropriate Assessment Required? (x/✓)	Would Alternatives be better or worse?
Relevant Aspects of Preferred Spatial Strategy					
27% of housing (816 units) developments is to be delivered in 'other' settlements according to local needs.	<p>Potential for new housing to occur within or adjacent to the SPA in locations which could affect blanket bog habitat either directly or indirectly. This in turn may damage the habitat used by Merlin, Hen Harrier and Lesser Black-Backed Gulls.</p> <p>However, there are no settlements within the SPA that could fall within the 'other settlements' category. The nearest is Dunsop Bridge which lies outside the site boundary.</p>	<p>None required.</p> <p>Policy DMG1 'General Considerations' explicitly ensures that the integrity of European Sites must not be adversely affected either alone or in combination with other plans or projects. In addition, Policy DME2: Landscape and Townscape Protection directly seeks to protect habitats such as blanket bog.</p>	No effects identified from the spatial strategy, therefore no potential for in-combination effects.	x	Options C, D and E include provisions for Borough-wide housing in unspecified locations. In the absence of supporting policy this could mean within the SPA and would therefore be worse. Other options are no better or worse than the preferred.
Relevant Key Statements					
Sustainable development and climate change	<p>Larger schemes will be required to deliver a proportion of renewable energy on site. This could include wind turbines. If the scheme is located in or near to the SPA this has potential to adversely affect Merlin, Hen Harrier or Lesser Black-Backed Gulls.</p> <p>It should be noted that no large scale developments are allocated in the SPA and only development for local needs would be allowed in nearby Dunsop Bridge (i.e. not large scale). As such it is not considered that this Statement</p>	<p>Provisions of DMG1.</p> <p>Policy DME5 'Renewable Energy' provides further detail to the effect that renewable energy proposals within or close to the SPA will not be allowed unless it can be demonstrated that the objectives of the designation will not be compromised by the</p>	No effects identified from the spatial strategy, therefore no potential for in-combination effects.	x	The first iteration of the statement and supporting policies were not as thorough and may have led to the possibility of an effect. This has since been rectified.

	poses a risk to the SPA. Further assurance is provided in other policies and statements identified in the adjacent column.	development. DME3 'Site and Species Protection and Conservation' states that developments adversely affecting the SPA will not be allowed unless benefits can outweigh these impacts in accordance with the requirements of the Habitats Regulations. Key Statement EN4: Biodiversity and Geodiversity reiterates that the council is bound by these regulations when it comes to considering applications.			
Housing provision	An annual average of 188 residual dwellings per year will need to be constructed. If these are in or immediately adjacent to the SPA this may result in damage to the blanket bog habitat, if present. However, it also identifies that land will be identified through the Strategic Housing Land Availability Assessment (SHLAA) which does not identify land within or immediately adjacent to the SPA.	The plan should be read as a whole and the distribution of development is determined by the spatial strategy above which indicates that there would be no new housing in the SPA. Policy DME3 and Key Statement EN4: Biodiversity and Geodiversity also add weight to this. Also DMG1 and DME2.	No effects identified from the spatial strategy, therefore no potential for in-combination effects.	✘	The first iteration of the statement and supporting policies were not as thorough and may have led to the possibility of an effect. This has since been rectified.
Gypsy and traveller	If a gypsy and traveller site were to be located in or adjacent to the SPA it may cause damage to	Whilst it is unlikely that areas within the SPA would be	No effects identified from the spatial strategy, therefore no	✘	The first iteration of the statement and supporting

Bowland Fells SPA

Core Strategy Element	Development and Land Use Change and Potential Effects	Avoidance and Mitigation Potential	In-combination Effects Potential	Appropriate Assessment Required? (x/✓)	Would Alternatives be better or worse?
accommodation	any blanket bog habitat if present (either directly or indirectly) and may result in disturbance to qualifying breeding bird interests. Sites will not be identified until the Housing and Economic Development DPD is produced.	suitable for gypsy and traveller accommodation, the statement does state that proposals must not conflict with other policies in the plan (and hence protection policy on European Sites). Specifically this would include DME3 and Key Statement EN4: Biodiversity and Geodiversity. This is considered to remove the risk of adverse effects occurring as a result of this Statement. Also DMG1 and DME2.	potential for in-combination effects.		policies were not as thorough and may have led to the possibility of an effect, albeit very unlikely. This has since been rectified.
Business and employment development	An additional 9ha of employment land will be allocated. If this were to occur in or immediately adjacent to the SPA it may cause damage to any blanket bog habitat if present (either directly or indirectly) and may result in disturbance to qualifying breeding bird interests. However, the Core Strategy must be read as a whole and the spatial strategy identifies the employment land in locations at distance from the SPA.	In addition to the provisions of the spatial strategy, policy DME3 and Key Statement EN4: Biodiversity and Geodiversity are considered to add sufficient weight to this statement to rule out potential adverse effects on the SPA. The statement also refers to the need to develop brownfield sites in preference to greenfield.	No effects identified from the spatial strategy, therefore no potential for in-combination effects.	✘	The first iteration of the supporting policies were not as thorough and may have led to the possibility of an effect, albeit very unlikely. This has since been rectified.

Bowland Fells SPA					
Core Strategy Element	Development and Land Use Change and Potential Effects	Avoidance and Mitigation Potential	In-combination Effects Potential	Appropriate Assessment Required? (x/✓)	Would Alternatives be better or worse?
		Also DMG1 and DME2.			
Visitor economy	A significant increase in visitor numbers in the SPA may result in disturbance to qualifying breeding bird interests or trampling of the blanket bog habitat. Nonetheless, visitor pressure is not regarded by Natural England (on the Natura 2000 data form) as a threat to the SPA.	The Statement identifies that significant new attractions will be restricted unless they lead to improvements to the environment (and presumably the SPA within that). Similarly, the provisions of DME3 and Key Statement EN4: Biodiversity and Geodiversity are considered to add sufficient weight to this statement to rule out potential adverse effects on the SPA. Also DMG1 and DME2.	No effects identified from the spatial strategy, therefore no potential for in-combination effects.	x	The first iteration of the supporting policies were not as thorough and may have led to the possibility of an effect, albeit very unlikely. This has since been rectified.
Relevant Development Management Policies					
DME5: Renewable energy	The policy supports the development of renewable energy in certain locations under certain circumstances. If wind energy development in particular, were to be developed in or near to the SPA, this may have potential to adversely affect Merlin, Hen Harrier or Lesser Black-Backed Gulls.	The policy also identifies that renewable energy proposals within or close to the SPA will not be allowed unless it can be demonstrated that the objectives of the designation will not be compromised by the development. DME3 and Key Statement EN4: Biodiversity and Geodiversity	No effects identified from the spatial strategy, therefore no potential for in-combination effects.	x	The first iteration of the statement and supporting policies were not as thorough and may have led to the possibility of an effect. This has since been rectified.

Bowland Fells SPA

Core Strategy Element	Development and Land Use Change and Potential Effects	Avoidance and Mitigation Potential	In-combination Effects Potential	Appropriate Assessment Required? (x/✓)	Would Alternatives be better or worse?
		also add strength to this. Also DMG1.			
DMH2: Gypsy and traveller accommodation	If a gypsy and traveller site were to be located in or adjacent to the SPA it may cause damage to any blanket bog habitat if present (either directly or indirectly) and may result in disturbance to qualifying breeding bird interests.	The policy references the need for the proposals not to conflict with any other policies in the Core Strategy. Therefore this refers to the provisions of DME3, Key Statement EN4: Biodiversity and Geodiversity and the Key Statement on Gypsy and traveller accommodation, all of which would ensure against development which would cause harm to the SPA. Also DMG1 and DME2.	No effects identified from the spatial strategy, therefore no potential for in-combination effects.	✘	The first iteration of the statement and supporting policies were not as thorough and may have led to the possibility of an effect. This has since been rectified.
DMH3: Dwellings in the open countryside	Even individual dwellings in the open countryside have potential to result in significant adverse effects if located within the SPA in a manner and location which could damage blanket bog habitat or cause disturbance to qualifying bird interests.	The policy also states that proposals would be refused if they adversely affected designated sites of nature conservation interest. Combined with the provisions of DMG1, DME2, DME3 and Key Statement EN4: Biodiversity and Geodiversity, it is not considered that this policy	No effects identified from the spatial strategy, therefore no potential for in-combination effects.	✘	The first iteration of the statement and supporting policies were not as thorough and may have led to the possibility of an effect. This has since been rectified.

Bowland Fells SPA					
Core Strategy Element	Development and Land Use Change and Potential Effects	Avoidance and Mitigation Potential	In-combination Effects Potential	Appropriate Assessment Required? (x/✓)	Would Alternatives be better or worse?
		could have an adverse effect.			
DMB1: Supporting business growth and the local economy	If sited within or adjacent to the SPA, the development of new business premises and/or farm diversification projects have potential to cause damage to blanket bog habitats (either directly or indirectly) and/or may cause disturbance to qualifying bird interests if inappropriately designed. However, the Core Strategy must be read as a whole and the spatial strategy identifies the employment land in locations at distance from the SPA.	In addition to the provisions of the spatial strategy, policy DME2, DME3 and Key Statement EN4: Biodiversity and Geodiversity are considered to add sufficient weight to this statement to rule out potential adverse effects on the SPA. See also Policy DMG1.	No effects identified from the spatial strategy, therefore no potential for in-combination effects.	x	The first iteration of the statement and supporting policies were not as thorough and may have led to the possibility of an effect. This has since been rectified.
DMB2: The conversion of barns and other rural buildings for employment uses	If a rural building were to be converted within or adjacent to those parts of the SPA where qualifying interest species were present, there is potential for disturbance as a result of noise.	The policy identifies that conversions would only be allowed if buildings were already within a defined settlement or group of buildings and that there would be no harm to nature conservation interests. This is further strengthened by policy DME3 and Key Statement EN4: Biodiversity and Geodiversity. See also Policy DMG1.	No effects identified from the spatial strategy, therefore no potential for in-combination effects.	x	The first iteration of the statement and supporting policies were not as thorough and may have led to the possibility of an effect. This has since been rectified.
DMB3: Recreation and	Depending upon the scale and nature of the development, if this were to take place in or	In addition to the provisions of policy DME3 and Key	No effects identified from the spatial strategy, therefore no	x	The first iteration of the statement and supporting

This has since been rectified.
DMB3: Recreation and tourism development	Depending upon the scale and nature of the development, if this were to take place in or adjacent to the SAC it may have potential to damage grassland habitat.	See above provisions. Furthermore, it identifies the need to take account of any nature conservation impacts.	No effects identified from the spatial strategy, therefore no potential for in-combination effects.	x	The first iteration of the statement and supporting policies were not as thorough and may have led to the possibility of an effect. This has since been rectified.

European Sites outside Ribble Valley Borough

The Initial Screening exercise identified that the following six sites had potential to be affected by the Core Strategy (the site's distance from the Ribble Valley boundary is shown in brackets):

- North Pennine Moors SPA (11.8km)
- South Pennine Moors SPA Phase 2 (9km)
- Ribble and Alt Estuaries Ramsar Site (14.7km)
- Ribble and Alt Estuaries SPA (14.7km)
- Morecambe Bay Ramsar Site (12.3km)
- Morecambe Bay SPA (12.3km)

The reason for this was that despite their distance from Ribble Valley Borough, the sites had potential to be functionally linked to the Bowland Fells SPA by virtue of them sharing some of the same qualifying bird interests. These mobile species can use a network of sites for breeding, and feeding and adverse effects at one site may indirectly affect populations associated with another site.

It was considered that if the Core Strategy were deemed to have a potentially significant effect upon any of these bird interests within the Bowland Fells SPA, then this may indirectly affect some of these other sites which shared the same qualifying bird interests.

However, following the detailed screening assessment above, it has been concluded that no significant effects would be likely on the Bowland Fells SPA as a result of the Core Strategy. As such, it is concluded that as none of the qualifying bird interests at the Bowland Fells SPA would be affected, then it would therefore not be possible for the Core Strategy to affect any of the other listed sites above.

4.4 In-Combination Effects

The HRA needs to consider not only the strategies and policies within the Core Strategy that may lead to significant impacts upon European sites on their own but also those that may have a significant impact in-combination with other plans and projects. These may be spatial planning documents produced by the neighbouring authorities or major developments anticipated within the borough. Table 2-1 outlines relevant plans and projects that were considered in-combination with the Core Strategy.

Tables 4-3 and 4-4 identify that the Core Strategy is not likely to result in any significant adverse effects upon the European Sites identified. Furthermore, it has been determined that the Core Strategy will have zero effects upon these sites (not merely no significant effects) and as such it would therefore not be possible to result in an in-combination effect with any other plans or projects.

5 CONCLUSION

It has been concluded that the Publication Core Strategy is unlikely to have any significant effects on the European Sites identified, either alone or in-combination with other plans or projects. **As such, it is NOT proposed to undertake Appropriate Assessment.**

We seek Natural England's opinion and agreement or otherwise with this conclusion.

Appendix A

Conservation Objectives

**European Site Conservation Objectives for
Bowland Fells Special Protection Area
Site Code: UK9005151**

With regard to the individual species and/or assemblage of species for which the site has been classified ('the Qualifying Features' listed below);

Avoid the deterioration of the habitats of the qualifying features, and the significant disturbance of the qualifying features, ensuring the integrity of the site is maintained and the site makes a full contribution to achieving the aims of the Birds Directive.

Subject to natural change, to maintain or restore:

- The extent and distribution of the habitats of the qualifying features;
- The structure and function of the habitats of the qualifying features;
- The supporting processes on which the habitats of the qualifying features rely;
- The populations of the qualifying features;
- The distribution of the qualifying features within the site.

Qualifying Features:

A082 *Circus cyaneus*; Hen harrier (Breeding)

A098 *Falco columbarius*; Merlin (Breeding)

Additional Qualifying Features Identified by the 2001 UK SPA Review:

A183 *Larus fuscus*; Lesser black-backed gull (Breeding)

Explanatory Notes: European Site Conservation Objectives

European Site Conservation Objectives are those referred to in the Conservation of Habitats and Species Regulations 2010 (the "Habitats Regulations") and Article 6(3) of the Habitats Directive 1992. They are for use when either the appropriate nature conservation body or competent authority is required to make an Appropriate Assessment under the relevant parts of the respective legislation.

These conservation objectives are set for each bird feature for a [Special Protection Area \(SPA\)](#). Where the objectives are met, the site can be said to demonstrate a high degree of integrity and the site itself makes a full contribution to achieving the aims of the Birds Directive for those features. On the first page of this document there may be a list of 'Additional Qualifying Features identified by the 2001 UK SPA Review'. These are additional features identified by the UK SPA Review published in 2001 and, although not yet legally classified, are as a matter of Government policy treated in the same way as classified features.

This document is also intended for those who are preparing information to be used for an appropriate assessment by either the appropriate nature conservation body or a competent authority. As such this document cannot be definitive in how the impacts of a project can be determined. Links to selected sources of information, data and guidance which may be helpful can be found on Natural England's website. This list is far from exhaustive.

**European Site Conservation Objectives for
North Pennine Dales Meadows Special Area of Conservation
Site code: UK0014775**

With regard to the natural habitats and/or species for which the site has been designated ('the Qualifying Features' listed below);

Avoid the deterioration of the qualifying natural habitats and the habitats of qualifying species, and the significant disturbance of those qualifying species, ensuring the integrity of the site is maintained and the site makes a full contribution to achieving Favourable Conservation Status of each of the qualifying features.

Subject to natural change, to maintain or restore:

- The extent and distribution of qualifying natural habitats and habitats of qualifying species;
- The structure and function (including typical species) of qualifying natural habitats and habitats of qualifying species;
- The supporting processes on which qualifying natural habitats and habitats of qualifying species rely;
- The populations of qualifying species;
- The distribution of qualifying species within the site.

Qualifying Features:

H6410. *Molinia* meadows on calcareous, peaty or clayey-silt-laden soils (*Molinion caeruleae*); Purple moor-grass meadows

H6520. Mountain hay meadows

Explanatory Notes: European Site Conservation Objectives

European Site Conservation Objectives are those referred to in the Conservation of Habitats and Species Regulations 2010 (the "Habitats Regulations") and Article 6(3) of the Habitats Directive 1992. They are for use when either the appropriate nature conservation body or competent authority is required to make an Appropriate Assessment under the relevant parts of the respective legislation.

These conservation objectives are set for each habitat or species of a [Special Area of Conservation \(SAC\)](#). Where the objectives are met, the site can be said to demonstrate a high degree of integrity and the site itself makes a full contribution to achieving favourable conservation status for those features.

This document is also intended for those who are preparing information to be used for an appropriate assessment by either the appropriate nature conservation body or a competent authority. As such this document cannot be definitive in how the impacts of a project can be determined. Links to selected sources of information, data and guidance which may be helpful can be found on Natural England's website. This list is far from exhaustive.
